

SHORT-FORM SCRIPT ARCHITECTURE & 60S RETENTION BLUEPRINT

Unified Audio-Visual (AV) Production Specification, WPM Telemetry & Cognitive Pacing Framework

Author / Lead Architect	Muhammad Khoiruzzadittaqwa (Zadit) - PT Prisma Digital Kreatif
Target Channels	TikTok, Instagram Reels, YouTube Shorts (Vertical 9:16)
Duration & Word Limits	Max 60 Seconds 130 - 145 Spoken Words (135-150 WPM Natural Pace)
Visual Reset Protocol	Max 4.0 Seconds interval per B-roll, camera reframing, or text cue
Theoretical Grounding	Cognitive Load Theory (Sweller), Dual Coding (Paivio), ACL ScriptWriter (DaoD et al.)

1. The 6-Beat Retention Timeline Architecture

Every high-performing 60-second vertical video adheres to six deterministic cognitive milestones. Violating this timeline triggers immediate swipe-away actions:

Timeline	Narrative Milestone	Cognitive Mechanism	Production Execution Target
00:00 - 00:03	Pattern Interrupt Hook	System 1 heuristic appraisal; breaks habitual scrolling inertia.	Visually provocative gesture + direct accusation or paradox.
00:04 - 00:15	Agitation & Loss Aversion	Validates viewer struggle; introduces tangible cost of inaction.	Screen recording of failure, red warning stats, fast cut.
00:16 - 00:25	The Re-Hook Inflection	Resets dopamine decay right at the 20-second retention drop.	Angle shift / overhead shot + 'Aturan 4 Detik' bold text.
00:26 - 00:44	High-Density Solution	Cognitive clarity; Paivio's dual coding (audio + matching text).	3-part bulleted takeaway, 1 idea per sentence, zero filler.
00:45 - 00:54	Proof & Payoff	Validates the premise; resolves narrative tension.	Inspectable master template preview, clean final artifact.
00:55 - 01:00	Seamless Loop CTA	Micro-action trigger; loop phrase bridges back to 00:00.	Incomplete bridge phrase ('...karena') driving >100% loop.

2. Turnkey AV Production Master Script (Case Study Implementation)

Script Title: **Stop Wasting Your First 3 Seconds** | Target Time: 60s | Spoken Words: 138 | Visual Cuts: 12

Timecode	Visual & B-Roll Cue (Editor)	Spoken Audio & Voiceover (Talent)	SFX & Mood
00:00-00:03	Medium close-up. Talent stares intensely at camera holding empty jar upside down. Snap zoom + bold text: 'STOP BUANG 60 DETIK LO'.	"90% video pendek gagal bukan karena visualnya buram, tapi karena scriptnya kelamaan basa-basi di 3 detik awal."	Sub-bass drop + glass impact
00:04-00:14	Split screen. Left: talking head video. Right: analytics graph showing retention cliff drop at 00:03.	"Begitu lo buka dengan kalimat 'Hai guys balik lagi sama gue', 70 persen jempol penonton udah geser ke video orang lain."	Vinyl scratch + whoosh
00:15-00:25	Overhead desk angle. Hand circles digital timer at 4.0s. High contrast title: 'ATURAN 4 DETIK'.	"Rahasianya ada di aturan 4 detik. Otak manusia di mobile feed butuh kejutan visual baru setiap 4 detik sebelum dopaminnya turun."	Mechanical ticking riser
00:26-00:44	Three-part graphical stack slides in synchronously with speech cadence: 1. Action Hook, 2. Contrarian Data, 3. Micro-Payoff.	"Bagi naskah lo jadi dua kolom: apa yang didengar talent, dan apa yang dilihat editor. Jangan biarkan talent ngomong tanpa ada B-roll pendukung atau teks penegas."	Typewriter tick per bullet

00:45-00:54	Full-screen AV script table preview showing color-coded columns for talent and editor.	"Dengan format ini, video 60 detik lo bukan cuma ditonton sampai tuntas, tapi memandu editor motong klip dengan presisi frame."	Clean bell chime
00:55-01:00	Talent points down. Prompt sticker: 'Simpan buat syuting besok'. Quick snap back to opening frame.	"Simpan video ini buat acuan syuting lo besok, karena..."	Whoosh loop to start
